1. AP625X Evaluation Board Introduction

AP625X Evaluation board (EVB) likes as figure1. That is designed for IEEE802.11 a/b/g/n/ac 1x1 WLAN with integrated Bluetooth and FM application. It is subject to provide a convenient environment for customer's verification on Wi-Fi or Bluetooth function. There are many controller pins and reserved GPIO on Evaluation board which describes as below.

Figure1. Top view of AP625X EVB

Interface highlights:

1. U1: AP625X SIP module.
2. J1: UART interface connects with UART transport board for BT measuring.
3. J2: Enable (H) or disable (L) Bluetooth and Wi-Fi function.
4. J6: VBAT / WL_VIO / BT_VIO for main system I/O power path.
5. J7: 5V DC mini USB input connector.
6. J8: Standard SDIO interfaces for Wi-Fi performance measured.
7. J11: WL_VIO power path for 1V8 or 3V3 selection.

8. S1: SMA connector let RF signal in/out path, you could connect with RF cable or dipole antenna.
9. Ct1: WLAN and BT control pins, strongly recommended WL_HWAKE(IRQ) connected to MCU.

2. Wi-Fi function verification step

Wi-Fi SDIO: Using external pull up resistors depends on the SDIO supply voltage. For 1.8V, the resistance range is 30KΩ~82KΩ. For 3.3V, its range from 21 KΩ~41 KΩ on the four data lines and the CMD line as the following circuitry.

Figure2. Wi-Fi verification connection interface to Host SDIO

Hardware Setup:
- ❖ Refer to Figure2 SDIO pin definition connects the J8 interface of AP6XXX evaluation board to Host SDIO control interface.
- ❖ Using pull high resistors (R6, R7, R10, R28, R29) that resistance is 30Kohm for 1.8V or 3.3V VDDIO pull up voltage. (Pull high resistors are un-necessary if at verification phase.)
- ❖ Connects an external antenna at SMA connector on the evaluation board.
- ❖ Note to the VDDIO voltage level should be the same with GPIO voltage level of Host CPU. (VDDIO 3.3V or 1.8V selection by jump J11)

Wi-Fi software setup:
Please follow up software guideline of AMPAK official released.

# 3. Bluetooth function verification step

Figure3. Bluetooth verification connection interface to Host UART

Hardware Setup:
- ❖ Refer to Figure3 UART pin definition connects the J1 interface of AP625X evaluation board to Host UART control interface.
- ❖ Connects an external antenna at SMA connector on the evaluation board.
- ❖ Note to the VDDIO voltage level should be the same as GPIO voltage level of Host CPU.

Wi-Fi and Bluetooth software setup:
Please follow up software guideline of AMPAK official released.
